EMPLOYEE ONBOARDING PLAYBOOK

Before the first day

A named manager and onboarding buddy coordinate each new starter. The checklist records completion evidence; sending a welcome email is not the same as provisioning access.

01 / Five business days before start

People Operations confirms the start date, manager and assigned office calendar. IT prepares a managed laptop and the standard access request. The line manager names a buddy, prepares a first-week plan and identifies any customer-system access that needs separate approval. Do not place personal identity documents in the project knowledge library.

02 / Access requests

The manager approves role-based access and the system owner verifies permissions. IT provides account activation through the approved private process. The new starter sets up multifactor authentication before accessing internal systems. Shared starter passwords must not be included in an onboarding document.

03 / First-day readiness check

Before the employee starts, People Operations checks that the laptop, activation instructions, buddy and welcome schedule are ready. Missing items are assigned an owner and due date. Access to customer production systems is not part of the default starter package and must wait for explicit authorization.

Approved by the People Operations Manager on 10 December 2025. Security requirements come from AV-SEC-001.

EMPLOYEE ONBOARDING PLAYBOOK

First-week completion

The employee and buddy use the checklist together. The manager remains responsible for role clarity and access approval.

04 / Day-one orientation

The buddy introduces the team and explains the support channels. The manager reviews the role objectives and first-month work. The employee confirms device encryption, multifactor authentication and access to the People portal. Read AV-HR-001, AV-HR-002, AV-FIN-001 and AV-SEC-001 before submitting the policy acknowledgement.

05 / Training and first task

Complete information security training by the end of working day 5. The manager chooses a small, non-production first task with an acceptance criterion and a reviewer. A task involving restricted customer data requires the relevant access approval first. Record completion and any blocked prerequisites in the onboarding tracker.

06 / Week-one review

The manager meets the employee by the end of the first week to check access, workload and support needs. People Operations resolves missing policy acknowledgements. The buddy supports navigation but does not approve financial claims or additional system privileges.

When	Outcome	Accountable role
Day 1	MFA, device and role orientation	Manager and IT
By working day 5	Security training completed	New employee
End of week 1	Access and support review	Line manager

EMPLOYEE ONBOARDING PLAYBOOK

Thirty, sixty and ninety days

Onboarding continues after the welcome week. Reviews should identify missing support early and give the employee a clear record of agreed expectations.

07 / Day-30 checkpoint

At day 30, the manager reviews the first delivery, role objectives and access suitability. The employee records questions and training needs. Changes to system access follow the normal approval process. Any hybrid schedule is recorded under AV-HR-002 rather than assumed from a team calendar.

08 / Day-60 checkpoint

At day 60, review progress against the agreed objectives and update the development plan. The buddy can provide practical feedback but the line manager owns the assessment. People Operations checks that outstanding onboarding tasks have an owner. Do not store sensitive performance notes in a shared customer project space.

09 / Probation review

The probation period is 90 days under AV-HR-001. The manager holds the formal review on day 75 and sends the recommendation to People Operations so the outcome can be confirmed before day 90. Completing the onboarding checklist alone does not automatically confirm probation. The signed employment terms remain applicable.

Example distinction: security training is due by working day 5; the formal probation review is on day 75. These are separate milestones.
